Seismic Inversion Gerard T. Schuster, 2017-07-01 This book describes the theory and practice of inverting seismic data for the subsurface rock properties of the earth. The primary application is for inverting reflection and or transmission data from engineering or exploration surveys but the methods described also can be used for earthquake studies. Seismic Inversion will be of benefit to scientists and advanced students in engineering earth sciences and physics. It is desirable that the reader has some familiarity with certain aspects of numerical computation such as finite difference solutions to partial differential equations, numerical linear algebra and the basic physics of wave propagation. For those not familiar with the terminology and methods of seismic exploration a brief introduction is provided. To truly understand the nuances of seismic inversion we have to actively practice what we preach or teach. Therefore computational labs are provided for most of the chapters and some field data labs are given as well.

Monte Carlo Methods for Electromagnetics Matthew N.O. Sadiku, 2018-10-03 Until now novices had to painstakingly dig through the literature to discover how to use Monte Carlo techniques for solving electromagnetic problems. Written by one of the foremost researchers in the field, Monte Carlo Methods for Electromagnetics provides a solid understanding of these methods and their applications in electromagnetic computation. Including much of his own work, the author brings together essential information from several different publications. Using a simple clear writing style, the author begins with a historical background and review of electromagnetic theory. After addressing probability and statistics, he introduces the finite difference method as well as the fixed and floating random walk Monte Carlo methods. The text then applies the Exodus method to Laplace's and Poisson's equations and presents Monte Carlo techniques for handling Neumann problems. It also deals with whole field computation using the Markov chain, applies Monte Carlo methods to time-varying diffusion problems and explores wave scattering due to random rough surfaces. The final chapter covers multidimensional integration. Although numerical techniques have become the standard tools for solving practical complex electromagnetic problems, there is no book currently available that focuses exclusively on Monte Carlo techniques for electromagnetics. Alleviating this problem, this book describes Monte Carlo methods as they are used in the field of electromagnetics.

Engineering Analysis Zhihe Jin, 2024-05-20 Engineering Analysis: Advanced Mathematical Methods for Engineers introduces graduate engineering students to the fundamental but advanced mathematics tools used in engineering application, especially in mechanical, aerospace and civil engineering. Most engineering problems are described by differential equations, particularly partial differential equations (PDEs). Deformation and failure in solid structures, fluid flow, heat transfer and mass diffusion are all governed by PDEs in general. Many physical quantities in engineering are tensors, including deformation gradient, strain rates, stresses, elastic stiffness and thermal conductivity of composite materials. This book helps engineering graduate students develop the skills to establish the mathematical models of engineering problems and to solve the problems described by the mathematical models. Incorporates

numerous engineering examples to help students better understand mathematical concepts and methods for developing mathematical models and finding the solutions of engineering problems Integrates the MATLAB computation tool with many MATLAB programs to enhance students ability to solve engineering problems Includes tensor analysis to better prepare students for advanced engineering courses such as theory of elasticity fluid dynamics and heat transfer Inclusion of tensor analysis also allows a unified treatment of vector and tensor calculus

Compiler Techniques for MATLAB Programs Luiz Antonio De Rose, University of Illinois at Urbana-Champaign. Department of Computer Science, 1996 Abstract This thesis addresses the issues of translating an interactive array language such as MATLAB into a traditional compiled language such as Fortran in order to achieve better performance It describes the main techniques developed for our MATLAB to Fortran 90 compiler to extract information from the high level semantics of MATLAB for the generation of high performance code To perform the translation an inference mechanism is necessary to generate the declarations for a typed language to select the appropriate functions and operations and to allocate the necessary space The inference mechanism developed for this MATLAB to Fortran 90 compiler combines static and dynamic inference methods for intrinsic type shape rank and structural inference This inference is enhanced with value propagation and symbolic dimension propagation analyses The experimental results which compare compiled generated programs with the corresponding interpreted MATLAB execution show that the compiler can generate code that performs more than 1000 times faster than MATLAB on an SGI Power Challenge and as fast as the corresponding hand written Fortran 90 programs When compared with the performance of C MEX files generated by the MathWorks MATLAB compiler we observed that for our tests the Fortran 90 programs ran faster than the corresponding C MEX programs on an SGI Power Challenge and on a Sun SPARCstation 10 This better performance is mainly attributed to our enhanced inference mechanism Expanded Abstracts with Biographies, 1999 Languages and Compilers for Parallel Computing, 1995 **Smart Antennas with MATLAB, Second Edition** Frank Gross, 2015-02-09 The most complete current guide to smart antenna design and performance Featuring new coverage of reconfigurable antennas vector antennas and direction finding antennas this up to date resource offers a rigorous review of the basic electromagnetic principles that drive smart antenna design and deployment Case studies and worked examples using MATLAB are provided End of chapter assignments reinforce the concepts presented Thoroughly revised to reflect recent developments and the latest technologies this is a comprehensive
