Planning and Implementing your Final Year Project — with Success! Mikael Berndtsson, Jörgen Hansson, B. Olsson, Björn Lundell, 2013-03-09 Don't wait for someone to write a book you want to read write it yourself! This was the message we received when we asked around for a book that described final year projects for computer science and information systems. In this book we have gathered our experiences of conducting and supervising final year projects in computer science and information systems. In this book we present a process for conducting final year projects. This process was developed at the University of Skovde Sweden. It has been applied successfully to a wide spectrum of projects with many different subject areas and styles of project. Typical subject areas have included for example artificial intelligence, theoretical computer science, databases, data communication, distributed systems, human computer interaction, operating systems, real time systems, software engineering, systems analysis and technology transfer. The styles of projects have been both theoretical and more empirically oriented and have included both science and technology oriented projects. It is our hope that this book will be a valuable companion to the three actors involved in a final year project: student, supervisor and examiner. In addition to the general descriptions and advice provided in this book we want to emphasise that it is important for students to find out the exact requirements at the department where the project is undertaken. May 2002 Mikael Berndtsson, Jorgen Hansson, Bjorn Olsson, Bjorn Lundell. Acknowledgements: This book would not have been possible without the support of a number of people.

Human Resource Development R. Krishnaveni, 2008-05-31 Human Resource Development (HRD) is fundamental in generating and implementing the tools needed to manage and operate the organization right from the production management, marketing and sales to research and development in order to be more productive. This can be done by making people sufficiently motivated, trained, informed, managed, utilized and empowered. Thus HRD forms a major part of human resource management activities in the organizations. This book has been carefully developed keeping in mind the requirements of all the varied segments that could use this book extensively and specifically for the students who have chosen HR elective and scholars pursuing research in the broad field of HR. The book is divided into nineteen chapters and each chapter is backed by illustrations, exercises and case studies appropriately. The first two chapters start with the introduction to the field. The third and fourth chapters give an introduction to how HRD plays a role in learning the behavior of employees. Rest of the chapters five to eighteen deal with various functions of HRD. Finally the last chapter brings out a detail methodology of how to develop a validated instrument which could be used for survey research in the HR field. The book has been written in very simple and easily understandable manner with relevant quoted references from earlier researches in this field. This will definitely help the readers to refer the source material if detail reading is required.
