

Heart Dissection

1. Locate the four main blood vessels attached to the heart. The two thicker-walled vessels are the arteries; they leave the heart at the more rounded front (ventral) side. The thinner-walled veins enter the heart at the top of the back (dorsal) side.
2. Looking at the front side of the heart, identify the following external features using the diagram to help:
 - a. right and left atria
 - b. right and left ventricles
 - c. coronary arteries and veins

Figure 1 Ventral (front) view of the heart. The pulmonary vein and vena cava enter the atria on the dorsal (back) side of the heart so are not visible on this diagram.

3. Why are the right and left sides apparently on the wrong side?
4. Can you distinguish the coronary arteries and veins? What are their functions?
5. If water was poured into the vena cava, through which vessel would it emerge from the heart?

To inspect the internal structure of the heart, cut through the ventricle walls, along the lines shown in the diagram. This is best done with a sharp scalpel or a pair of sharp scissors. Be careful at this stage only to cut through the ventricle walls, leaving the walls of the atria intact. Look carefully inside each ventricle.
