Feature	Definition	Requirement Shopping
<b>Standard based and interoperable messaging protocol</b>	Messaging protocol must be based on industry standards to enable interoperability	
<b>Send Only</b>	Also called Push MEP is simple one-way messaging where a message is sent with no expectation response.	
<b>Receive only</b>	Also called Pull MEP is a message pattern where a non-addressable sender supports the ability to explicitly obtain messages from another application. This can be used for exchanges	
<b>Request/Response exchange</b>	Message pattern consists of one or more request/response pairs. The correlation between request and a response is well defined. In this response maybe deferred and the requesting application may or may not block application processing until a response is received	
<b>Diagnostics</b>	Authentication, diagnostic, logging & routing information should be included in the message and not the payload	
<b>Reliability</b>	Protocol capability to support assured and single delivery to the receiving application with no loss

*Requirements Engineering* Ian Sommerville, Pete Sawyer, 1997-05-05 Requirements engineering is the process of discovering documenting and managing the requirements for a computer based system The goal of requirements engineering is to produce a set of system requirements which as far as possible is complete consistent relevant and reflects what the customer actually wants Although this ideal is probably unattainable the use of a systematic approach based on engineering principles leads to better requirements than the informal approach which is still commonly

used This book presents a set of guidelines which reflect the best practice in requirements engineering Based on the authors experience in research and in software and systems development these guidelines explain in an easy to understand way how you can improve your requirements engineering processes The guidelines are applicable for any type of application and in general apply to both systems and software engineering The guidelines here range from simple common sense to those which propose the introduction of complex new methods The guidelines and process improvement schemes have been organised so that you can pick and choose according to your problems goals and available budget There are few dependencies between guidelines so you can introduce them in any order in your organisation Guidelines presented in the book are consistent with ISO 9000 and CMM are ranked with cost benefit analysis give implementation advice can be combined and applied to suit your organisation s needs are supported by a web page pointing to RE tools and resources

**Requirements Engineering** Elizabeth Hull,Ken Jackson,Jeremy Dick,2002 We live in a commercial world where much of our work is undertaken through a project oriented approach This has the advantage of determining the cost and time of the project to be undertaken which in their turn are based on the knowledge of what the project is to deliver Computing is no different in this regard and so in order to organize our activities we need to know what it is that is to be delivered Hence Requirements Engineering an organized approach to determining what is required in the project system that is being undertaken There are some problems with the idea of Requirements Engineering which I have on previous occasions encapsulated in a single sentence called The Mock Theorem of Information Systems which states There exists some point in time when everyone involved in the system knows what they want and agrees with everyone else Clearly nonsense how would you know what everyone is agreeing to for example But in order to build a system on a project basis this sentence has to be assumed to be true either explicitly or even worse implicitly Then Requirements Engineering can be made to work and the correct product system delivered by the project However we do not have an established alternative to the project approach and the business world is used to projects So Requirements Engineering is necessary but it needs tempering to allow for the desired certainty actually being unknown
