

Intensive Care Unit (ICU)

Some of the equipment used to support our patients

Central venous catheter

This catheter allows high concentration intravenous fluids to be administered to patients. It is used for administration of drugs, transfusion of blood products and central venous pressure monitoring.

Breathing tubes

These are the tubes that are inserted into a patient's airway to provide temporary respiratory support in the hospital. The tubes are either:

Feeding pump

Used to deliver food to the patient through a tube in the side to provide the nutrients needed for energy.

External ventricular drain (EVD)

Regulates volume around the brain to maintain ICP.

Intracranial pressure (ICP) monitoring

A tube is inserted through the skull to monitor intracranial pressure.

High flow oxygen therapy

Delivers oxygen at high flow rates to help with breathing.

Blood gas machine

Used to measure the levels of oxygen, carbon dioxide and pH in the blood.

Infusion pumps

Delivers fluids and drugs continuously over the day such as antibiotics, pain relief and sedatives.

Arterial line

This tube is inserted into a blood artery to monitor blood pressure and take blood samples.

Cough assist machine

Blows air into and out of the lungs to help with the cough reflex.

Ventilator

Provides oxygen and helps the patient to breathe.

Suction machine

Used to remove secretions from the airway when patients have breathing tubes in place to help with breathing.

Nitric oxide delivery device

This device delivers nitric oxide to the patient to help with breathing and reduce blood pressure.

Bronchoscopy

This procedure uses a bronchoscope to examine the airways and lungs. It can be used to diagnose and treat conditions of the respiratory system.

Bedside monitor

Monitors vital signs such as heart rate, blood pressure, oxygen saturation and breathing.

PCA pump (patient controlled analgesia)

Delivers intravenous pain relief when patient presses a button.

Epidural

An injection in the back to deliver pain relief to patients.

Patient record

A record of important information such as blood pressure, heart rate, respiratory rate, intracranial pressure, urine output.

Specialised ICU bed

Designed to provide maximum support for the body and help prevent pressure sores, falls, and other complications. It is used for patients who require high levels of monitoring and support.

Sequential compression device

Used to prevent blood clots in the legs of patients who are lying in bed.

Urinary catheter

Used to collect urine from the bladder to monitor kidney function and fluid balance.

Haemodialysis machine

A machine used to filter the blood of patients with kidney failure.

Patient cooling device

Used to cool the patient's body temperature.

Sounds

Medical sounds from the equipment help staff to monitor their patients.

External pacemaker

Temporarily pacing the heart of a patient with a pacemaker.

Ultrasound

High frequency sound waves create an image of internal body parts. Used to guide procedures and to measure.

Extracorporeal membrane oxygenation

Provides temporary life support to the heart and lungs.

Reis Miranda, A. Williams, Ph. Loirat, 2012-12-06 Intensive Care Medicine has been continuously growing and expanding culturally technically and geographically Monitoring and instrumentation are continuously improving and more and more hospitals are getting Intensive Care facilities The costs have proportionally increased over the years so that ICUs represent today a major cost for health structures Since the available resources are limited a real need is emerging to set the limits and indications of Intensive Care It is understood that the problem not only involves medical considerations but also ethical and economical aspects of the utmost importance For the first time in Europe this book edited by Reis Miranda and his colleagues tackles systematically the many structural aspects of the European Intensive Care The organisation and financing of health care in the Old Continent is deeply different from the American one and the results and consequent proposals obtained in the USA cannot simply be transferred to this side of the Atlantic Ocean We are extremely pleased to welcome this first European attempt to discuss the Intensive Care problem It lays no claims to giving definite replies in a continuously developing field but it will surely become the basis for

future discussions and proposals I am particularly happy that this work has mainly developed within the European Society of Intensive Care whose final target is to ensure a common standard of therapy in our old Europe beyond national differences We warmly congratulate the authors and I am sure that their work will find wide diffusion and consent
