Questions & Answers

1. The car below emits sound waves, represented by red circles, that are heard by an observer. Based on the pattern of sound waves, what is the direction and speed of the car?

- A. Towards the observer, faster than the speed of sound.
- B. Towards the observer, slower than the speed of sound.
- C. Away from the observer, faster than the speed of sound.
- D. Away from the observer, slower than the speed of sound.

Correct Answer: D. Away from the observer, slower than the speed of sound.

Explanation: The Doppler effect occurs when the source of sound waves is in motion. As the source moves, it "catches up" a bit to the sound waves in front of it, and moves away from the sound waves behind it. The result is that sound waves are closer together in front of the moving source, and farther apart behind the moving source. In the image, the sound waves are closer together to the left of the car, and farther apart on the right of the car. Therefore the car is moving to the left, away from the observer. If the car were moving faster than the speed of sound, the car would be in front of all of its sound waves.
