**Spectroscopy: The Key to the Stars** Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating [An Atlas of Stellar Spectra, with an Outline of Spectral Classification](#)

William Wilson Morgan, 1943 **An Atlas of Stellar Spectra, with an Outline of Spectral Classification. By W.W. Morgan, Philip C. Keenan and Edith Kellman. [With Plates.]** William Wilson MORGAN, Philip C. KEENAN, Edith KELLMAN, 1943 [Spectroscopy: The Key to the Stars](#) Keith Robinson, 2007-01-16 This is the first non technical book on

spectroscopy written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for them It is an ideal companion to existing books on observational amateur astronomical spectroscopy

**Stellar Spectral Classification** Richard O. Gray, Christopher J. Corbally, Adam J. Burgasser, 2009-03-29 Written by leading experts in the field Stellar Spectral Classification is the only book to comprehensively discuss both the foundations and most up to date techniques of MK and other spectral classification systems Definitive and encyclopedic the book introduces the astrophysics of spectroscopy reviews the entire field of stellar astronomy and shows how the well tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics The book begins with a historical survey followed by chapters discussing the entire range of stellar phenomena from brown dwarfs to supernovae The authors account for advances in the field including the addition of the L and T dwarf classes the revision of the carbon star Wolf Rayet and white dwarf classification schemes and the application of neural nets to spectral classification Copious figures illustrate the morphology of stellar spectra and the book incorporates recent discoveries from earth based and satellite data Many examples of spectra are given in the red ultraviolet and infrared regions as well as in the traditional blue violet optical region all of which are useful for researchers identifying stellar and galactic spectra This essential reference includes a glossary handy appendixes and tables an index and a Web based resource of spectra In addition to the authors the contributors are Adam J Burgasser Margaret M Hanson J Davy Kirkpatrick and Nolan R Walborn

**The Analysis of Starlight** J. B. Hearnshaw, 1990-04-19 This book presents a detailed pedagogical account of the equation of state and its applications in several important and fast growing topics in theoretical physics chemistry and engineering This book is the story of the analysis of starlight by astronomical spectroscopy It describes the development of the subject from the time of Joseph Fraunhofer who in 1814 used a telescope mounted prism to observe the spectral light emitted from several bright stars He discovered that light was missing at certain colours wavelengths in the starlight and these so called spectral lines were subsequently shown to hold clues to the nature of the stars themselves The book explains how the classification of stars using their line spectra developed into a major branch of astronomy whilst new methods in astrophysics made possible the approximate quantitative analysis of spectral lines in the 1920s and 1930s After the Second World War these techniques were considerably improved when computers were programmed to model the structure of the outer layers of stars Basic concepts in spectroscopy and spectral analysis are also covered and finally Dr Hearnshaw comments on the stellar spectroscopy of some individual star

Spectroscopy Keith Robinson (B.A., Ph.D., F.R.A.S.), 2007 This text explains the physics and physical processes that cause the stellar spectra to be as they are Written
