**VOCABULARY:**

- coal
- energy
- power
- solar

**MATERIALS:**

- 3 types of [hand lenses](#)
- [fickle foam](#)
- leaves
- aluminum foil
- can of water (in case a leaf burns out of control)

**BACKGROUND:**

Solar energy is an environmentally good source of energy because it is non-polluting. However, it isn't always practical everywhere around the world. Weather conditions sometimes prevent full use of solar energy. Solar energy, however, is very powerful.

Concentrating light causes sunlight to create energy, making some items work. For example, a solar calculator or solar heater. In this activity, students will learn how to capture these light rays to make heat energy. Most children learn sooner or later that a magnifying lens will make paper burn. Students will learn how light is concentrated and then discover they can create a fire if not careful.

**PROCEDURE:**

1. This lab is designed to teach children safety and the power of solar energy.
2. On a sunny day, go outside and give each student a hand lens, 3 dry leaves and a piece of aluminum foil. (You can always use a piece of paper instead of leaves, but leaves are safer). Put the leaves on the
