The text also includes current information on opioid analgesics, cannabis, and cannabinoid-based medications. Clinical Pharmacology in Athletic Training teaches students to administer appropriate pharmacological agents for the management of the patient's condition. The information includes indications, contraindications, dosing, interactions, and adverse reactions. The following features are included to aid in the learning process: Chapter objectives set the stage for the main topics covered in the chapter; Key terms are boldfaced to indicate terms of special importance, and a glossary of definitions is included at the back of the book; Red Flag sidebars highlight warnings and precautions for certain medications or medicolegal issues; Evidence in Pharmacology sidebars highlight recent research regarding medications; Clinical Application sidebars present real-life stories from the field of athletic training; Case studies highlight specific therapeutic medication applications and are accompanied by questions that prompt readers to think critically about the issues presented; Quick reference drug tables describe medication types, generic and brand names, pronunciations, common indications, and other special considerations for the athletic trainer.
