A Trusted Guide to Discrete Mathematics with Proof. Now in a newly revised edition, *Discrete Mathematics with Proof* has become increasingly popular in recent years due to its growing applications in the field of computer science. *Discrete Mathematics with Proof*, Second Edition, continues to facilitate an up-to-date understanding of this important topic, exposing readers to a wide range of modern and technological applications. The book begins with an introductory chapter that provides an accessible explanation of discrete mathematics. Subsequent chapters explore additional related topics, including counting, finite probability theory, recursion, formal models in computer science, graph theory, trees, the concepts of functions and relations. Additional features of the Second Edition include an intense focus on the formal settings of proofs and their techniques, such as constructive proofs, proof by contradiction, and combinatorial proofs. New sections on applications of elementary number theory, multidimensional induction, counting, tulips, and the binomial distribution. Important examples from the field of computer science are presented as applications, including the Halting problem, Shannon's mathematical model of information, regular expressions, XML, and Normal Forms in relational databases. Numerous examples that are not often found in books on discrete mathematics, including the deferred acceptance algorithm, the Boyer-Moore algorithm for pattern matching, Sierpinski curves, adaptive quadrature, the Josephus problem, and the five-color theorem. Extensive appendices that outline supplemental material on analyzing claims and writing mathematics, along with solutions to selected chapter exercises. Combinatorics receives a full chapter treatment that extends beyond the combinations and permutations material by delving into non-standard topics such as Latin squares, finite projective planes, balanced incomplete block designs, coding theory, partitions, occupancy problems, Stirling numbers, Ramsey numbers, and systems of distinct representatives.
