Visible Objects Control what s visible in your scene by hiding or unhiding layers

Foreground Depth Set the viewing plane depth at which you begin to see objects in your scene By default the foreground depth starts at the location of your camera but you can manually set a foreground depth using section cuts and clipping planes

Background Depth Set how deep into the model you want to see by using object masks or fog

Camera Perspective Position your camera to the view you want to see and configure your field of view and perspective settings

Style Determine how your model will look This includes render settings for the faces and edges in your model but also includes specialty settings like watermarks guides and section planes Not only will you understand exactly what those five points are you ll learn multiple ways to control them Using these methods you will gain complete control over the look of your viewports in LayOut You will master every aspect of a SketchUp scene and style to enable you to create impressive presentations and drawings in the least amount of time possible
