

Food Chain

A series of relationships between organisms in an ecosystem that shows where each plant or animal gets its energy from.

consumers, and finally decomposers before being recycled back into the soil for producers to start the cycle all over again.

Ecological pyramids are similar to food chains, although they are slightly more detailed. While a food chain shows a simple flow of energy, an ecological pyramid (also trophic pyramid, Eltonian pyramid, energy pyramid, or sometimes just a food pyramid) shows the stages that energy will flow through.

Each layer of the ecological pyramid is referred to as a **trophic level** and will contain all the different species in the community that fits within the same category. The trophic level is where you will find all of the producers in that ecosystem. All of the grass, trees, flowers, moss, etc. can be found in this category. This is at the bottom of the ecological pyramid because it's the ground floor where energy production within the ecosystem starts.

Ecological Pyramid

Shows the levels of energy flow within a community of organisms.

J. R. Fasham, 2013-03-09 The impetus for the conference held at Bombannes France in May 1982 arose out of a Scientific Committee on Oceanic Research SCOR Working Group on Mathematical Models in Biological Oceanography This group was chaired by K H Mann and held two meetings in 1977 and 1979 At both meetings it was felt that although reductionist modelling of marine ecosystems had achieved some successes the future progress lay in the development of holistic ecosystem models The members of the group K H Mann T Platt J M Colebrook D F Smith M J R Fasham J Field G Radach R E Ulanowicz and F Wulff produced a critical review of reductionist and holistic models which was published by the Unesco Press Platt Mann and Ulanowicz 1981 One of the conclusions of this review was that whether holistic or reductionist models are preferred it is critically important to increase the scientific effort in the measurement of physiological rates for the computation of ecological fluxes The Working Group therefore recommended that an international meeting should be organized which would attempt to bring together theoretical ecologists and biological oceanographers to assess the present and future capability for measuring ecological fluxes and incorporating these data into models An approach was made to the Marine Sciences Panel of the NATO Science Committee who expressed an interest in funding such a meeting They awarded a planning grant and a planning group was formed consisting of M J R Fasham M V Angel T Platt R E
