

Environmental Science
Ch 13 Study Guide-KEY

- 1) Define Climate—the average weather conditions in an area over a long period of time.
- 2) What factors determine the Earth's climate? Name all six.-1) latitude, 2) atmospheric circulation patterns, 3) oceanic circulation patterns, 4) the local geography of an area, 5) solar activity, and 6) volcanic activity.
- 3) Define Latitude—the distance north or south from the equator and is expressed in degrees.
- 4) What is located at 0° latitude? Equator
- 5) Why is latitude important and how does it affect the climate? Because the amount of solar energy an area of the Earth receives depends on its latitude.
- 6) What part of the Earth receives the most amount of solar energy? The Equator The least? The Poles
- 7) Describe what happens to the amount of daylight during both the summer and winter at the poles (Both north and south). At 45° north and south latitude, there is as much as 16 hours of daylight each day during the summer and as little as 8 hours of sunlight each day in the winter. At the North Pole in the winter, there is 24 hours of darkness. At the North Pole in the summer, there is 24 hours of daylight. It is the opposite at the South Pole.
- 8) Why does cold air sink? Because it is denser than warm air.
What happens as warm air rises? It expands and cools as it rises.
- 9) What does warm air hold more of, than cold air can? Water vapor
- 10) What causes wind? Solar energy heats the ground, which warms the air above it. This warm air rises, and cooler air moves in to replace it.
- 11) Other than sunlight, areas near the equator also receive a lot of what? Rain
- 12) Define prevailing winds-Winds that blow predominantly in one direction throughout the year.
- 13) Ocean currents have a great effect on climate because water holds large amounts of heat.
- 14) Surface ocean currents are mostly caused by what? Winds and the rotation of the Earth
- 15) Define El Nino-the periodic occurrence in the eastern Pacific Ocean in which the surface-water temperature becomes unusually warm. Winds push warm water eastward and rain follows into the southern U.S.
- 16) Define La Nina-the periodic occurrence in the eastern Pacific Ocean in which the surface water temperature becomes unusually cool.
