

Remember

- A point has position, but no dimension.
- A line extends in one dimension. Points that lie on the same line are collinear.
- A line segment is part of a line with two endpoints.
- A ray is part of a line with one endpoint.
- An angle is formed by two rays or segments with the same endpoint. The endpoint is the vertex.
- A plane extends in two dimensions. Points that lie in the same plane are coplanar.

Refer to the diagrams and decide if each statement is true or false. If it is true, shade in the circle and write the letter on the puzzle blank. The puzzle answer is the name of a Greek mathematician and his books about geometry, number theory, and geometric algebra.
