	External Ear The external ear consists of the pinna (auricle) and the ear canal. The pinna is the visible part of the ear that collects sound waves and directs them into the ear canal. The ear canal leads to the eardrum (tympanic membrane).	Middle Ear The middle ear is located behind the eardrum and contains three small bones: the malleus, incus, and stapes. These bones are responsible for transmitting sound vibrations from the eardrum to the inner ear.	Internal Ear The internal ear is located deep within the skull and contains the cochlea and the vestibular system. The cochlea is responsible for hearing, and the vestibular system is responsible for balance.	Common ENT Disorders Common ENT disorders include otitis media (middle ear infection), sinusitis (inflammation of the sinuses), and allergic rhinitis (hay fever).	ENT Examination The ENT examination involves a physical exam of the head and neck, including the ears, nose, and throat. The exam may include otoscopy (examining the ear canal and eardrum), rhinoscopy (examining the nasal cavity), and laryngoscopy (examining the larynx).	ENT History The ENT history includes a review of the patient's symptoms, medical history, and family history. The patient should be asked about any recent infections, allergies, or trauma to the head and neck.	ENT Physical Exam The ENT physical exam includes a visual inspection of the face and neck, palpation of the lymph nodes and thyroid gland, and auscultation of the lungs and heart.	ENT Diagnostic Tests Diagnostic tests for ENT disorders include audiometry (hearing test), otoscopy, rhinoscopy, laryngoscopy, and imaging studies such as CT scans and MRIs.	ENT Treatment Treatment for ENT disorders depends on the specific condition. It may include antibiotics for infections, decongestants for sinusitis, and antihistamines for allergic rhinitis. Surgery may be required for some conditions, such as otitis media with effusion and sinusitis.
	Nasal Cavity The nasal cavity is the part of the respiratory system that is located inside the nose. It is lined with mucous membranes and contains the olfactory epithelium, which is responsible for the sense of smell.	Sinuses The sinuses are air-filled cavities in the skull that are connected to the nasal cavity. They help to humidify and filter the air that we breathe. The four main sinuses are the maxillary, ethmoid, sphenoid, and frontal sinuses.	Allergic Rhinitis Allergic rhinitis is a common condition that is caused by an allergic reaction to environmental allergens. It is characterized by symptoms such as sneezing, runny nose, and itchy eyes.	Sinusitis Sinusitis is an inflammation of the sinuses that is often caused by a viral infection. It is characterized by symptoms such as facial pain, nasal congestion, and a thick, discolored nasal discharge.	ENT History The ENT history for a patient with sinusitis should include a review of the patient's symptoms, including the duration and severity of the symptoms, and any recent infections or allergies.	ENT Physical Exam The ENT physical exam for a patient with sinusitis should include a visual inspection of the nasal cavity, palpation of the sinuses, and auscultation of the lungs and heart.	ENT Diagnostic Tests Diagnostic tests for sinusitis include a nasal endoscopy, which allows the doctor to look directly into the nasal cavity, and a CT scan of the sinuses.	ENT Treatment Treatment for sinusitis includes the use of decongestants, saline nasal irrigation, and antibiotics. In some cases, surgery may be required to remove the source of the infection.	
	Pharynx The pharynx is the part of the respiratory and digestive systems that is located at the back of the mouth and throat. It is responsible for the passage of food and air.	Larynx The larynx is the part of the respiratory system that is located in the neck. It is responsible for the production of sound and the protection of the airway.	Trachea The trachea is the windpipe, which is a large tube that carries air from the larynx to the lungs. It is lined with cilia and mucus to help filter the air.	Common ENT Disorders Common ENT disorders of the throat and larynx include laryngitis (inflammation of the larynx) and tonsillitis (inflammation of the tonsils).	ENT History The ENT history for a patient with a throat disorder should include a review of the patient's symptoms, including the duration and severity of the symptoms, and any recent infections or allergies.	ENT Physical Exam The ENT physical exam for a patient with a throat disorder should include a visual inspection of the throat, palpation of the lymph nodes, and auscultation of the lungs and heart.	ENT Diagnostic Tests Diagnostic tests for throat disorders include a laryngoscopy, which allows the doctor to look directly into the larynx, and a CT scan of the neck.	ENT Treatment Treatment for throat disorders includes the use of antibiotics, pain relievers, and voice rest. In some cases, surgery may be required to remove the source of the infection.	
	Pediatric ENT Pediatric ENT disorders are common in children and can affect their hearing and speech. Common conditions include otitis media with effusion (fluid in the middle ear) and adenoid hypertrophy (enlarged adenoids).	Diagnosis The diagnosis of pediatric ENT disorders is based on a physical exam, a review of the patient's symptoms, and diagnostic tests such as audiometry and otoscopy.
