

Biology 102 Study Guide Chapters 7-9

Chapter 7

In chapter 7 of Biology 102, students should focus on key concepts such as cell structure and function, cell division, and DNA replication. Important events to remember include the discovery of DNA and the development of genetic engineering. Notable figures include James Watson, Francis Crick, and Rosalind Franklin.

Cell Structure and Function:

Cells are the basic units of life, and all living things are made up of one or more cells. Cells come in a variety of shapes and sizes, and they have a variety of functions. The three main parts of a cell are the cell membrane, the nucleus, and the cytoplasm.

Cell Division:

Cell division is how cells reproduce. There are two main types of cell division: mitosis and meiosis. Mitosis is the type of cell division that produces cells for growth and repair. Meiosis is the type of cell division that produces sperm and eggs.

DNA Replication:

DNA replication is how cells make copies of their DNA. DNA replication occurs during cell division. DNA replication is a complex process, but it can be summarized in three steps: initiation, elongation, and termination.

Chapter 8

Key Concepts:

- The cell cycle is the process by which cells divide and reproduce.*
- Interphase is the phase of the cell cycle during which the cell grows and prepares for division.*
- Mitosis is the phase of the cell cycle during which the cell divides into two daughter cells.*
- Cytokinesis is the process by which the cell's cytoplasm divides into two new cells.*
- Chromosomes are the structures that carry the genetic information of a cell.*
- Mitosis is the process by which chromosomes are separated into the two new cells.*
- A centromere is the point at which chromosomes are attached to each other.*
