#### I. Identification & Essay

**Direction: Give and discuss at least three elements or compounds and their importance to our Biological/Life Foundations (15 points)**

**Elements and compounds are undeniably necessary for our everyday life as we know it. One of the most important elements and compounds in our biological/life foundations are the following:**

- H<sub>2</sub>O**
- NaCl**
- O**

**H<sub>2</sub>O or most commonly known as water is important as water's extensive capability to dissolve a variety of molecules has earned it the designation of "universal solvent," and it is this ability that makes water such an invaluable life-sustaining force. On a biological level, water's role as a solvent helps cells transport and use substances like oxygen or nutrients. All living things on Earth need water. Everything from people, plants, animals, and even mushrooms and things too small to see need water to survive.**

**NaCl or popularly known as salt is also important because it plays a essential role in maintaining human health. It is the main source of sodium and chloride ions in the human diet. Sodium is essential for nerve and muscle function and is involved in the regulation of fluids in the body. Sodium also plays a role in the body's control of blood pressure and volume. It is also an essential nutrient and is used in healthcare to help prevent patients from becoming dehydrated. It is used as a food preservative and as a seasoning to enhance flavor. Sodium chloride is also used in manufacturing to make plastics and other products.**
