A school consists of 740 students divided into 5 grade levels. The numbers of students in each grade are shown in the table below.

Grade	8	9	10	11	12
Number of students	120	125	119	195	181

The Principal of the school wishes to select a sample of 25 students. She wishes to ensure that, as closely as possible, the proportion of the students from each grade in the sample is the same as the proportions in the school.

- (a) Calculate the number of grade 12 students who should be in the sample. [3]

The Principal selects the students for the sample by asking those who took part in a previous survey if they would like to take part in another. She takes the first of those who reply positively, up to the maximum needed for the sample.

- (b) State which two of the sampling methods listed below best describe the method used. [2]

Stratified      Quota      Convenience      Systematic      Simple random

Newell, 2013-12-09 Developmental systems theory provides powerful tools for predicting complex dynamic interactions among biological and environmental processes in human behavior and health This groundbreaking handbook provides a roadmap for integrating key concepts of developmental systems theory such as self organization reciprocal dynamic interaction and probabilistic epigenesis and simulation models connectionist and agent based models with advanced dynamic modeling approaches for testing these theories and models Internationally renowned developmental science scholars present innovations in research design measurement and analysis that offer new means of generating evidence based decisions to optimize the course of health and positive functioning across the life span Topics include epigenetic development and evolution the relationship between neural systems growth and psychological development the role of family environments in shaping children's cognitive skills and associated adult outcomes and more

**Learning at the Crossroads of Theory and Practice** Piet Van den Bossche, Wim H. Gijssels, Richard G. Milder, 2012-03-21 Core concepts in education are changing For example professional performance or expertise is not uniquely the fruit of specialist knowledge acquired at professional schools but the sum of influences exerted by a complex web of continuous learning opportunities for which an individual is well or ill prepared by their schools and their workplace

The key contributory factors to professional expertise are how professional schools connect to professional practice how schools prepare graduates for continuous learning and how the workplace endorses continuous development Thus the question this volume addresses how to design learning and working environments that facilitate the integration of these three elements is at the heart of contemporary pedagogical theory The authors also ask a second vital question how do we educate learners that go on to maximize their life s learning opportunities by regulating their own ongoing learning Learning at the Crossroads of Theory and Practice argues that with the theory of learning at a crossroads this is an unprecedented opportunity for learning about learning The book sheds light on different elements of this challenge integrating theory and practice in business education generating and fully exploiting workplace learning opportunities and enriching our classrooms by coupling theoretical knowledge with the richness of real life experience
