Erickson, 2017-02-15 China s shipbuilding industry has grown more rapidly than any other in modern history Commercial shipbuilding output jumped thirteen fold from 2002 12 ensuring that Beijing has largely reached its goal of becoming the world s leading shipbuilder Yet progress is uneven with military shipbuilding leading overall but with significant weakness in propulsion and electronics for military and civilian applications It has never been more important to assess what ships China can supply its navy and other maritime forces with today and in the future Chinese Naval Shipbuilding answers three pressing questions What are China s prospects for success in key areas of naval shipbuilding What are the likely results for China s navy What are the implications for the U S Navy To address these critical issues this volume assembles some of the world s leading experts and linguistic analysts often pairing them in research teams These sailors scholars industry professionals and government specialists have commanded ships at sea led shipbuilding programs ashore toured Chinese vessels and production facilities invested in Chinese shipyards and analyzed and presented important data to top level decision makers in times of crisis In synthesizing their collective insights

this book fills a key gap in our understanding of China its shipbuilding industry its navy and what it all means Regulating Genetically Modified Crops in View of Environmental Risks Ancui Liu,2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China s GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities
