Kanold, Lee Stiff, 1997 An algebra textbook for students in grades 9 12 **Multivariable Calculus and Mathematica®** Kevin R. Coombes, Ronald L. Lipsman, Jonathan M. Rosenberg, 2012-12-06 One of the authors stated goals for this publication is to modernize the course through the integration of Mathematica Besides introducing students to the multivariable uses of Mathematica and instructing them on how to use it as a tool in simplifying calculations they also present introductions to geometry mathematical physics and kinematics topics of particular interest to engineering and physical science students In using Mathematica as a tool the authors take pains not to use it simply to define things as a whole bunch of new gadgets streamlined to the taste of the authors but rather they exploit the tremendous resources built into the program They also

make it clear that Mathematica is not algorithms At the same time they clearly see the ways in which Mathematica can make things cleaner clearer and simpler The problem sets give students an opportunity to practice their newly learned skills covering simple calculations with Mathematica simple plots a review of one variable calculus using Mathematica for symbolic differentiation integration and numerical integration They also cover the practice of incorporating text and headings into a Mathematica notebook A DOS formatted diskette accompanies the printed work containing both Mathematica 2.2 and 3.0 version notebooks as well as sample examination problems for students This supplementary work can be used with any standard multivariable calculus textbook It is assumed that in most cases students will also have access to an introductory primer for Mathematica
