Nonlinearity in Living Systems: Theoretical and Practical Perspectives on Metrics of Physiological Signal Complexity Sladjana Spasić, Srdjan Kesić, 2019-06-28 The biological basis of physiological signals is incredibly complex While many types of research certainly appreciate molecular cellular and systems approach to unravel overall biological complexity in the recent decades the interest for mathematical and computational characterization of structural and functional basis underlying biological phenomena gain wide popularity among scientists Nowadays we witnessed wide range

applications of nonlinear quantitative analysis that produced measures such as fractal dimension power law scaling Hurst exponent Lyapunov exponent approximate entropy sample entropy Lempel Ziv complexity as well as other metrics for predictions of onset and progression of many pathological conditions especially in the central nervous systems CNS In this Research Topic we seek to bring together the recent practical and theoretical advances in the development and application of nonlinear methods or narrower fractal based methods for characterizing the complex physiological systems at multiple levels of the organization We will discuss the use of various complexity measures and appropriate parameters for characterizing the variety of physiological signals up to the systems level There are multiple aims in this topic The recent advancement in the application of nonlinear methods for both normal and pathological physiological conditions is the first The second aim is to emphasize the more recent successful attempt to apply these methods across animal species Finally a comprehensive understanding of advantages and disadvantages of each method especially between its mathematical assumptions and real world applicability can help to find out what is at stake regarding the above aims and to direct us toward the more fruitful application of nonlinear measures and statistics in physiology and biology in general

Ligamentous Injuries of the Foot and Ankle Pieter D'Hooghe, Kenneth J. Hunt, Jeremy J. McCormick, 2022-09-13

Aimed at sports medicine and foot and ankle clinicians globally who see and treat ligamentous injuries to the foot and ankle the focus of this comprehensive text is on cutting edge techniques in both non surgical and surgical treatment rehabilitation and safe and expeditious return to sport Techniques and technology move very rapidly in this space and this book serves as a ready resource on current surgical and rehabilitation techniques for these conditions Opening with a review of the relevant anatomy and biomechanics of the foot and ankle as well as current imaging techniques the text then turns to the diagnosis management and rehabilitation of specific ligamentous injuries and conditions Multiple management techniques are presented for lateral ankle sprains and instability syndesmotic injuries deltoid and spring ligament injuries Lisfranc injuries and plantar plate and sesamoid injuries Generous clinical photographs and illustrations highlight current techniques and diagnostic algorithms and selected chapter associated video segments are included demonstrating surgical and rehabilitation techniques and equipment Written and edited by experts in the field who routinely manage these injuries using the most effective techniques Ligamentous Injuries of the Foot and Ankle is a terrific resource for orthopedic and sports medicine clinicians and rehabilitation providers at all levels
