

TYPES OF THERMOMETER

(i) Resistance thermometer (Thermistor)

These thermometers are based on wheatstone bridge principle, according to this principle when current flowing through G is zero then

$$\frac{P}{Q} = \frac{R}{S}$$

In these thermometers resistance plays the role of thermometric property.

(ii) Thermocouple

Thermocouples are based upon Seebeck effect.

According to this principle when two dissimilar metals are joined to form two junctions and if these two junctions are maintained at different temperatures emf or voltage is generated and this emf is proportional to temperature difference between two junctions. Therefore in thermocouples emf or voltage plays the role of thermometric property.

(iii) Constant volume gas thermometer

In constant volume gas thermometer pressure plays the role of thermometric property.

$$P \propto T$$

$P \propto T$

Thermometric property \rightarrow Pressure
