

**Mathematical Induction:  
A Systematic Technique in Analyzing  
Mathematical Proofs**

**Abstract.** Mathematical induction is a technique for proving results or establishing statements for natural numbers and reasoning about objects, events or procedures containing repetition. In this research paper we will explain the main techniques used in mathematical induction through drawing mathematical examples. This will be showing that those techniques will apply to proofs which involve the base step which proves that a statement is true for the initial value and the inductive step which proves that a statement is true for the  $n$ th iteration (or number  $n$ ), then it is also true for  $(n+1)$ th iteration ( or number  $n+1$ ).

**1. Introduction**

The principle of mathematical induction has been used for about 350 years. It was familiar to Fermat, in a disguised form, and the first clear statement seems to have been made by Pascal in proving results about the arrangement of numbers now known as Pascal's Triangle. There are many applications of inductive arguments and the aim of my talk is to give some examples, illustrating why this method has become an indispensable tool for mathematicians (Bather, 1994).

We begin with a general form of the principle. Let  $p_1, p_2, p_3, \dots$  be statements or propositions, each of which may be true or false.

**Principle :**

*Suppose that (i)  $p_1$  is true and that, for  $n \geq 1$ , (ii)  $p_n \Rightarrow p_{n+1}$  then  $p_1, p_2, p_3, \dots$  are all true.*
