The image displays three overlapping worksheets for a reading comprehension activity. The central worksheet is titled "Force and Acceleration" and includes the following sections:

- Reading Passage:** A text explaining force and acceleration, starting with "Force and acceleration are fundamental concepts in classical mechanics. According to Newton's second law, which states that the net force acting on an object is equal to the mass of the object multiplied by its acceleration ( $F = ma$ ), the relationship between force and acceleration is directly proportional. In other words, if the net force acting on an object is doubled, its acceleration will also double, provided the mass remains constant. This relationship is a key principle in understanding the behavior of physical systems." It continues with an example of a free-fall motion and a paragraph about Newton's second law.
- Comprehension Questions:** A list of 15 numbered questions, each followed by a "True" or "False" checkbox.
  - 1. Force and acceleration are directly proportional.
  - 2. According to Newton's second law, the acceleration of an object is directly proportional to the net force applied to it.
  - 3. If the net force acting on an object is doubled, its acceleration will also double, provided the mass remains constant.
