updates the computational treatment of transients. Necessarily two new chapters address the subject of modeling and models for most types of equipment are discussed. The adequacy of the models, their validation, and the relationship between model and the physical entity it represents are also examined. There are now chapters devoted entirely to isolation, coordination, and protection, reflecting the revolution that metal oxide surge arresters have caused in the power industry. Features additional and more complete illustrative material, figures, diagrams, and worked examples. An entirely new chapter of case studies demonstrates modeling and computational techniques as they have been applied by engineers to specific problems.
