

An object O is placed at the location shown in front of a convex spherical mirror. Use ray tracing to determine the location and size of the image in the mirror. As you work, keep in mind the following properties of principal rays:

1. A ray parallel to the axis, after reflection, passes through the focal point F of a concave mirror or appears to come from the (virtual) focal point of a convex mirror.
2. A ray through (or proceeding toward) the focal point F is reflected parallel to the axis.
3. A ray along the radius through or away from the center of curvature C intersects the surface normally and is reflected back along its original path.
4. A ray to the vertex V is reflected, forming equal angles with the optic axis.

Now, using the two rays you have traced, draw the image of the object at the correct location, with the correct orientation and size.

Draw the vector ending at the intersection of the reflected rays. The location, orientation, and length of the vector will be graded.
