

Lubricating & Insulating Materials Lab Report

Types of lubricants:

Types of lubricants			
Solid lubricants	Semi solid	Liquid Lubricants	Synthetic lubricants
Wax	Grease	Polyglycols	Imines
Talc	Vaseline	Silicones	Amides
Mica			

Additives used in lubricants

- Anti-oxidant: Aromatic amines, Phenols, Sulphides and phosphates
- Corrosion Inhibitor: Amino salts and salts of sulphonic acids
- Antiwear agents: Triresyl phosphate
- Foam inhibitors: Glycerols

Properties of lubricants:

- A good lubricant generally possesses the following characteristics:
- high boiling point and low freezing point (in order to stay liquid within a wide range of temperature)
- High viscosity index
- Thermal stability
- Hydraulic stability
- Corrosion prevention
- High resistance to oxidation.

Selection of Lubricants:

Roller chain lubricant is applied to the outer surfaces and allowed to flow into the pin-and-bushing joint. For this reason, coating the chain with a heavy, thick grease does little toward supplying the joint with the lubricant it needs. Oil does the job better.

The oil grade, viscosity, and purity are the most important factors for proper chain lubrication. Because some grades of oil contain additives or detergents that may foam or leave a residue in the chain's joints, it is best to use non-detergent, single-viscosity petroleum oils selected primarily for the drive operating temperatures, Table 1. If available, antifoam, anti-rust, and extreme-pressure additives

SAE Grade	Temperature, F	Temperature, C
S	-50 to 50	-45 to 10
10	-20 to 80	-29 to 27
20	10 to 110	-12 to 43
30	20 to 130	-7 to 54
40	30 to 140	-1 to 60
50	40 to 150	4 to 68

Note: When the temperature range permits a choice, the heavier grade should be used.
