

### Convergence and Resiliency

#### Integrated DS1 Network Interface Unit (NIU) Functionality

The FLASHWAVE 4100 ES DS1 service card with integrated NIU condenses trouble ticket resolution time and expedites installation. Its extensive loopback capabilities, NPRM, 30-day PM binning, CI alarm recognition and integrated multi-pattern Bit Error-Rate Testing (BERT) provide a powerful tool set to expedite installation, mitigate service issues and reduce truck rolls. As a result, operational expenses are reduced.

#### Integrated In-Service Y.1731 OAM

The FLASHWAVE 4100 ES system eliminates the need for an external Ethernet NID, shrinking both footprint and cost when using the FLASHWAVE 4100 ES integrated Y.1731 responder along with a test head such as the FLASHWAVE 9410 system or equivalent. Network operators provision in-service performance measurements including delay, delay variation and frame loss, without affecting production data.

#### High Availability Resilient Card Pair

Carrier-class networks require high availability with no single point of failure. The COE Ethernet service unit offers multiple provisioning options for self-healing resilient hardware operation. Client interfacing options include IEEE 802.3ad link aggregation (LAG), optical Y-cable and dual Ethernet. The LAG option splits working and protect Ethernet segments across the resilient card pair, offering both facility and hardware resiliency. The optical Y-cable option provides high-availability hardware resiliency by interfacing optical ports to early model devices not supporting IEEE 802.3ad LAG. Dual Ethernet mode operates with client ports active on both cards where EVCs automatically fail over to one card in the event of hardware impact.
