**Advanced Digital Preservation** David Giarretta,2011-06-01 There is growing recognition of the need to address the fragility of digital information on which our society heavily depends for smooth operation in all aspects of daily life This has been discussed in many books and articles on digital preservation so why is there a need for yet one more Because for the most part those other publications focus on documents images and webpages objects that are normally rendered to be simply displayed by software to a human viewer Yet there are clearly many more types of digital objects that may need to be preserved such as databases scientific data and software itself David Giarretta Director of the Alliance for Permanent Access and his contributors explain why the tools and techniques used for preserving rendered objects are inadequate for all these other types of digital objects and they provide the concepts techniques and tools that are needed The book is structured in three parts The first part is on theory i e the concepts and techniques that are essential for preserving digitally encoded information The second part then shows practice i e the use and validation of these tools and techniques Finally the third part concludes by addressing how to judge whether money is being well spent in terms of effectiveness and cost sharing Various examples of digital objects from many sources are used to explain the tools and techniques presented The presentation style mainly aims at practitioners in libraries archives and industry who are either directly responsible for preservation or who need to prepare for audits of their archives Researchers in digital preservation and developers of preservation tools and techniques will also find valuable practical information here Researchers creating digitally encoded information of all kinds will also need to be aware of these topics so that they can help to ensure that their data is usable and can be valued by others now and in the future To further assist the reader the book is supported by many hours of videos and presentations from the CASPAR project and by a set of open source software
