Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

Machine Learning Ryszard Stanisław Michalski, Jaime G. Carbonell, Tom M. Mitchell, 1983 *Inductive Databases and Constraint-Based Data Mining* Sašo Džeroski, Bart Goethals, Panče Panov, 2010-11-18 This book is about inductive databases and constraint based data mining emerging research topics lying at the intersection of data mining and database research. The aim of the book is to provide an overview of the state of the art in this novel and citing research area. Of special interest are the recent methods for constraint based mining of global models for prediction and clustering the unification of pattern mining approaches through constraint programming the clarification of the relationship between mining local patterns and global models and the proposed inductive frameworks and approaches for inductive databases. On the application side applications to practically relevant problems from bioinformatics are presented. Inductive databases (IDBs) represent a database view on data mining and knowledge discovery. IDBs contain not only data but also generalizations, patterns and models valid in the data. In an IDB ordinary queries can be used to access and manipulate data while inductive queries can be used to generate, mine, manipulate and apply patterns and models. In the IDB framework patterns and models become first class citizens and KDD becomes an extended querying process in which both the data and the patterns/models that hold in the data are queried.

The Mind's Mirror Daniela Rus, Gregory Mone, 2024-08-06 An exciting introduction to the true potential of AI from the director of MIT's Computer Science and Artificial Intelligence Laboratory. Imagine a technology capable of discovering new drugs in days instead of years, helping scientists map distant galaxies and decode the language of whales and aiding the rest of us in mundane daily tasks from drafting email responses to preparing dinner. Now consider that this same technology poses risks to our jobs and society as a whole. Artificial Intelligence is no longer science fiction; it is upending our world today. As advances in AI spark fear and confusion, *The Mind's Mirror* reminds us that in spite of the very real and pressing challenges, AI is a force with enormous potential to improve human life. Computer scientist and AI researcher Daniela Rus, along with science writer Gregory Mone, offers an expert perspective as a leader in the field who has witnessed many technological hype cycles. Rus and Mone illustrate the ways in which AI can help us become more productive, knowledgeable, creative, insightful, and even empathetic, along with the many risks associated with misuse. *The Mind's Mirror* shows readers how AI works and explores what we as individuals and as a society must do to mitigate dangerous outcomes and ensure a positive impact for as many people as possible. The result is an accessible and lively exploration of the underlying technology and its limitations and possibilities, a book that illuminates our possible futures in the hopes of forging the best path forward.
