Introduction to Infrared System Design William L. Wolfe,1996 This tutorial text focuses on the optics and detector aspects of infrared system design It introduces the terminology processes and instrument design techniques available Design examples are based on real problems investigated by the author

Infrared Design Examples William L. Wolfe,1999 This tutorial covers infrared design examples in considerable detail building on principles presented in an earlier text *Introduction to Infrared System Design* SPIE PRESS Vol TT24 The text explores a range of problems illustrating several design issues with applications in military industry aeronautics space and medicine among others

Hands-on Morphological Image Processing Edward R. Dougherty,Roberto A. Lotufo,2003 Morphological image processing a standard part of the imaging scientist s toolbox can be applied to a wide range of industrial applications Concentrating on applications this text shows how to analyse the problems and then develop successful algorithms to solve them

Michels,2002 This tutorial presents optomechanical modeling techniques to effectively design and analyze high performance optical systems It discusses thermal and structural modeling methods that use finite element analysis to predict the integrity and performance of optical elements and optical support structures Includes accompanying CD ROM with examples

Fourier Transform Spectroscopy

Instrumentation Engineering Vidi Saptari,2004 Many applications today require the Fourier transform FT spectrometer to perform close to its limitations such as taking many quantitative measurements in the visible and in the near infrared wavelength regions In such cases the instrument should not be considered as a perfect black box Knowing where the limitations of performance arise and which components must be improved are crucial to obtaining repeatable and accurate results One of the objectives of this book is to help the user identify the instrument s bottleneck

Modulation Transfer Function in Optical and Electro-optical Systems Glenn D. Boreman,2001 This tutorial introduces the theory and applications of MTF used to specify the image quality achieved by an imaging system It covers basic linear systems theory and the relationship between impulse response resolution MTF OTF PTF and CTF Practical measurement and testing issues are discussed

An Engineering Introduction to Biotechnology J. Patrick Fitch,2002 This tutorial will help technical professionals in optics determine whether their technologies have potential application in the life sciences It also is useful as

a prep class for more detailed books on biology and biotechnology filling the gap between fundamental and high level approaches **Fundamentals of Antennas** Christos G. Christodoulou, Parveen F. Wahid, 2001 Annotation This tutorial explains antenna theory and operation and is intended for students engineers and researchers Basic wire antennas and array antennas are described in detail and other types are introduced including reflectors lenses horns microstrip Yagi and frequency independent antennas **Optical Design Fundamentals for Infrared Systems** Max J. Riedl, 2001 The practical popular 1995 tutorial has been thoroughly revised and updated reflecting developments in technology and applications during the past decade New chapters address wave aberrations thermal effects design examples and diamond turning

The Power- and Energy-handling Capability of Optical Materials, Components, and Systems Roger M. Wood, 2003 Annotation There is a maximum power and energy that you can put into or transmit through your optical system in many cases this maximum is well below the laser induced damage threshold This tutorial explains the factors and constraints that limit the power and energy handling capability of optical materials components and or systems Because the lasers coming off the production lines are much more stable efficient and controlled than in the past today s engineers often do not have the insight into the technology as was required of first generation laser engineers However important insights into the use and performance of the laser and optical systems can be lost unless we remind ourselves at periodic intervals of the problems our predecessors had to face **Resolution Enhancement Techniques in Optical Lithography** Alfred Kwok-Kit Wong, 2001 Ever smaller IC devices are pushing the optical lithography envelope increasing the importance of resolution enhancement techniques This tutorial encompasses two decades of research It discusses theoretical and practical aspects of commonly used techniques including optical imaging and resolution modified illumination optical proximity correction alternating and attenuating phase shifting masks selecting RETs and second generation RETs Useful for students and practicing lithographers **Optics and Spectroscopy** ,2003 *Optical Engineering* ,1999 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology **Current Developments in Optical Elements and Manufacturing** Qiming Xin, Robert Eugene Parks, 1998 A collection of papers examining developments in optical elements and manufacturing It covers optical materials optical materials and thin film techniques diffractive elements and fabricating techniques **Industrial Research** ,1959 **Optical Design and Testing** ,2002 **Optical System Design, Analysis, and Production** Philip J. Rogers, Robert Edward Fischer, 1983 **USB Design by Example** John Hyde, 2001 This unique guide goes beyond all the USB specification overviews to provide designers with the expert knowledge and skills they need to design and implement USB I O devices
