*4-ESS3-2 — Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.*

*Quick Review: Let's explore how we can protect ourselves from natural events like earthquakes or floods. Imagine coming up with different ideas, like building stronger houses or creating barriers to stop water. We can then compare these ideas to see which ones work best. By testing and observing, we learn how to keep people safe from these powerful Earth processes. It's like being a scientist and an inventor, finding smart ways to solve real-world problems!*

**Teacher Tip:** Use questions 1–5 for whole group, and 6–10 as exit slips.

1. **Explore and Reflect:** Imagine you are a scientist tasked with designing a new type of building that can withstand earthquakes. What materials would you choose, and how would your design reduce the impact on humans living in earthquake-prone areas? Explain your reasoning and consider any experiments you might conduct to test your design.
2. **Innovative Solutions:** Think about the effects of flooding in coastal areas. Propose two different strategies to reduce the impact of floods on human communities. Compare the effectiveness, cost, and feasibility of each solution, and reflect on which might be more beneficial in the long term.
3. **Community Planning:** Consider a town frequently affected by hurricanes. Design a community plan that incorporates natural and man-made solutions to minimize hurricane damage. How would you involve local residents in the planning process, and what scientific principles would guide your decisions?
4. **Historical Analysis:** Research a past natural disaster, such as a volcanic eruption or tsunami. Reflect on how the solutions implemented at that time either succeeded or failed in reducing human impact. How might modern science and technology improve these solutions today?
