Winston Revie, Herbert H. Uhlig, 2008-03-11 The classic book on corrosion science and engineering now in a valuable new edition The ability to prevent failures by managing corrosion is one of the main global challenges of the twenty first century However most practicing engineers and technologists have only a basic understanding of how they can actively participate in this urgent economic and environmental issue Now students and professionals can turn to this newly revised edition of the trusted Corrosion and Corrosion Control for coverage of the latest developments in the field including advances in knowledge new alloys for corrosion control and industry developments in response to public demand This Fourth Edition presents an updated overview of the essential aspects of corrosion science and engineering that underpin the tools and technologies used for managing corrosion enhancing reliability and preventing failures Although the basic organization of the book remains unchanged from the previous edition this new update includes An introduction to new topics including the element of risk management in corrosion engineering and new advanced alloys for controlling corrosion Expanded discussions on electrochemical polarization predicting corrosion using thermodynamics steel reinforcements in concrete and applications of corrosion control technologies in automotive nuclear and other industries A stronger emphasis on environmental concerns and regulations in the context of their impact on corrosion engineering A discussion of the challenge of reliability in nuclear reactors stainless steels the concept of critical pitting temperature and information on critical pitting potential CPP

Complemented with numerous examples to help illustrate important points Corrosion and Corrosion Control Fourth Edition enables readers to fully understand corrosion and its control and in turn help reduce massive economic and environmental loss It is a must read for advanced undergraduates and graduate students in engineering and materials science courses as well as for engineers technologists researchers and other professionals who need information on this timely topic

Conservation of Marine Archaeological Objects Colin Pearson,2014-05-20 Over the past twenty years there has been a significant increase in underwater activities such as scuba diving which coupled with the adventure andromance always associated with shipwrecks has led to rapid developments in the discovery and excavation of shipwrecked material These shipwrecks are invaluable archaeological time capsules which in themajoriety of cases have come to an equilibrium with their environment As soon as artefacts on the wreck site are moved this equilibrium is disturbed and the artefacts may commence to deteriorate sometimes in a rapid and devastating fashion In fact excavation without having conservation facilities available is vandalism the artefacts are much safer being left on the sea bed Such famous shipwrecks as the Mary Rose 1545 the Wasa 1628 and the Batabia 1629 have not only brought the world s attention to these unique finds but have also produced tremendous conservation problems The treatment of a 30 metre waterlogged wooden hull or large cast iron cannon is still causing headaches to conservators
