

Functions and Their Inverses

Functions and Their Inverses

A function is a set of ordered pairs. A function is a relation in which, for each distinct x -value, there is exactly one corresponding y -value. If a function f is a set of ordered pairs (x, y) , then the inverse of f is the set of ordered pairs (y, x) . When the inverse of a function f is itself a function, then f is said to be a **one-to-one function**.

One-to-One Functions

A function f is a **one-to-one function** if, for elements a and b in the domain of f ,
 $a \neq b$ implies $f(a) \neq f(b)$.
That is, different values of the domain correspond to different values of the range.
