**Diesel Reference Guide** Julius Rosbloom,1931      Using the IBM System Storage N series with IBM Tivoli Storage Manager Alex Osuna,Roland Tretau,IBM Redbooks,2010-04-29 IBM as a result of its recent product introduction of the IBM System Storage™ N series has become more tightly integrated with network attached storage NAS exploiting the backup and recovery features of the N series and Network Appliance™ storage systems This IBM Redbooks publication provides detailed descriptions and setup instructions practical examples and best practices for backing up the IBM System Storage N series using the IBM Tivoli Storage Manager This book includes descriptions and instructions for using the latest enhancements made to IBM Tivoli Storage Manager specifically for the IBM System Storage N series and Network Appliance storage systems You will learn how to configure and set up the IBM System Storage N series and IBM Tivoli Storage Manager Version 5.3 and 6.1 using NDMP backup and restore functions We address the following topics Configuring the N series for Network Data Management Protocol NDMP usage Using the IBM Tivoli Storage Manager software Backing up qtrees Single folder backup Single file folder restore Restoring using NDMP via GUI and command line interface Restoring from NDMP backup to an alternative site location on N series systems Integrating with Snapshot technology and SnapVault Using SnapShot differencing Using SnapMirror to Tape      *IBM Information Infrastructure Solutions Handbook* Sangam Racherla,Vikas Bajaj,Emile Knebel,Glenn Korn,Anna Kutepova,Gary Newell,Sebastian Szumczyk,IBM Redbooks,2010-07-11 An information infrastructure is comprised of software servers storage and networks integrated and optimized to deliver timely secure and trusted information throughout the organization and to its clients and partners With the explosive growth in data and information coupled with demands for projects with rapid ROI IT infrastructures and storage administrators are reaching a breaking point IBM can help with the changes needed to manage information availability security and regulatory and compliance requirements on a tighter budget And because the health of any business often depends on its ability to take advantage of information in real time a sound intelligent information infrastructure becomes critical to supporting new growth initiatives IBM offers an innovative approach to help you manage information growth more effectively and mitigate risks with a dynamic infrastructure that efficiently and securely stores and protects information and optimizes information access You can control protect manage and gain new intelligence from your information with the IBM leading edge Information Infrastructure products services and integrated solutions supported by world class expertise and access to top experts from around the world This IBM Redbooks publication provides an overview of the IBM Information Infrastructure solutions that are designed to help you manage the information explosion and address challenges of information compliance availability retention and security This will lead your company toward improved productivity service delivery and reduced risk while streamlining costs      **SAP Backup using Tivoli Storage Manager** Budi Darmawan,Miroslav Dvorak,Dhruv Harnal,Gerson Makino,Markus Molnar,Rennad Murugan,Marcos Silva,IBM Redbooks,2013-04-26 In this IBM Redbooks

publication we give an overview of different data management topics related to a typical SAP data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task. We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally we discuss data archiving using IBM DB2 CommonStore for SAP and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems one running DB2 and the other running Oracle database. We also implement LAN free backup and FlashCopy scenarios. In the sample implementation section we show many different tasks such as backup and restore database recovery backup monitoring and tuning. We also cover some advanced backup availability considerations such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and comprehensive data backup solution using the IBM Tivoli Storage Management product family.

*Networks and Systems Management* Iosif G. Ghetie, 1997-03-31. The deployment of communications networks and distributed computing systems requires the use of open standards based integrated management systems. During the last five years the overall industry effort to develop enhance and integrate management systems has crystallized in the concept of management platforms. Management platforms are software systems which provide open multi vendor multiprotocol distributed management services. They allow multiple management applications to run over core platform services which constitute the essential part of the management platform framework. This book provides a comprehensive analysis of the features and technical characteristics of distributed management platforms by examining both qualitative and quantitative management capabilities required by each management platform service. The analysis covers the management platform run time environment, the operational aspects of using management platforms, the development environment which consists of software toolkits that are used to build management applications, the implementation environment which deals with testing interoperability aspects of using management platforms and of course the distributed applications services which platforms make available to management applications. Finally the analysis covers the capabilities of several management applications either generic or specific to devices or resources which run on top of management platforms.
