Pann, Tammy Greear, **How to Build Self-Driving Cars From Scratch, Part 2** Bolakale Aremu, 2024-06-12 This is part 2 of my 3 part training guide on how to build self driving cars from scratch This guide is bundled with a repository containing simulations python scripts graphics and other useful assets In this step by step guide I teach you how to make an app that you can use to create a simulation where cars learn how to drive autonomously over racing tracks Here s a break down of the contents of this guide Part 1 Car mechanics In this part you ll learn how to draw the car and control it with the keyboard You will use a multimedia library for Python called Pyglet <https://pyglet.org> This is the only library you will use in this guide This is a cross platform windowing and multimedia library for Python It s a powerful yet easy to use Python library for building games and other visually rich applications on Windows macOS and Linux Part 2 Neural network and genetic algorithm You ll learn how to create the AI where you combine a neural network and genetic algorithm You ll learn how to add sensors to the car and get output from them To prevent the untrained network from car crashes a genetic algorithm will be used to train the cars This will help the cars to drive simple tracks Part 3 Challenges You ll add some challenges to the system Tracks get more complicated and will take advantage from the previous track training by storing and retrieving the car brains By the end of this training you will have created self driving cars that are capable of driving on unknown tracks by understanding how to steer accelerate and brake based on what cars see in front of them Since autonomous cars need a brain of some kind you know we need some AI artificial intelligence AI comes in many forms but in this guide you ll use a neural network where the weights are adjusted by a genetic algorithm Employment opportunities often come from work samples and concrete skills rather than a college degree So you need to learn the practical aspect well enough This guide will not only help you learn well and build a stunning portfolio it will also provide you continuous help and support With this book and my dedicated 24/7 help and support team there s nothing for you to fear I have helped many Python developers update their automation development skills launch successful careers and get hired for remote jobs I notice that even the most ambitious beginners can run into problems such as unable to decide where to begin Sometimes they get completely lost on the way and therefore need further help In Chapter 13 I explain how to download my repository which contains all updates of the Python scripts codes and simulations used in this Part 2 of the guide Although I explain all the codes used in this guide clearly if you need further help just use my support link at the end of the Chapter The truth is everyone needs help at one point or the other to learn and build automation in their development journey I can give you more challenges and their solutions in my subsequent trainings
