## Hook's Law Experiment

**Purpose:** To measure the spring constant of a spring using two different methods.

**Background:** If a weight  $F = mg$ , is hung from the end of an unknown spring, causing it to stretch a distance  $x$ , then an equal and opposite force,  $F$ , is exerted in the spring which opposes the pull of the weight. If  $F$  is not so large as to permanently stretch the spring, then the force  $F$ , will return the spring to its original length after the load is removed. The magnitude of the restoring force is directly proportional to the stretch.

$$F = kx$$

The constant  $k$  is called the spring constant. Its significance lies in relation to the change in length of the spring, as in the

$$F = mg = k \Delta l \quad (1)$$

In this case it is apparent that if a plot of  $F$  vs. distance  $x$  (or  $\Delta l$ ) of a linear pattern, this provides confirmation that the spring follows Hooke's Law and within error that is.

An additional aspect is possible. The difference of weight between weights that is added under a linear "Hooke's Law" restoring force. Thus for the simple harmonic motion, the period does not depend upon the amplitude of the oscillation. For such a motion, we have

$$T^2 = 4\pi^2/k \quad (2)$$

which gives us the spring constant,  $T$  is the period of the pendulum and  $m$  is the mass that is oscillating. Thus, the mass includes the mass of the spring itself. However, the entire spring does not oscillate with the same amplitude as the load (the attached mass) and therefore it is necessary to measure the effective load (or  $m$ ) in the above way, from the end of the spring plus some fraction of the mass of the spring. Based on earlier experiments, one third of the mass of the spring is a good approximation of the effective load due to the spring, that

$$m_{\text{eff}} = m + \frac{1}{3}m_s$$

where  $m_s$  is the effective load of the spring. Using this in Eq. (2), we find

$$k = \frac{4\pi^2 m_{\text{eff}}}{T^2} \quad (3)$$

The effective load of the mass can be determined by a suitable value under the influence
