undesirable traits or indeed embryos but perhaps later by more radical genetic engineering This has a profound effect on what we see as normal acceptable and responsible This book argues that these urgent and biopolitical issues should be central to how biology is taught as a subject Debate about life itself has always been at the forefront of connected molecular genetic and social personal identity levels and each of these levels requires processes of communication and debate what Anthony Giddens called in passing life politics In this book P draig Murphy opens the term up with examples from field research in schools student responses to educational films exploring the future of RGTs and science studies of strategic biotechnology and the lab practices of genetic screening Life political debate is thoroughly examined and is identified as a way of connecting mainstream education of biology with future generations Biotechnology Education and Life Politics will appeal to post graduates and academics involved with science education science communication communication studies and the sociology of education

Evolution Education Around the Globe Hasan Deniz, Lisa A. Borgerding, 2018-06-21 This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to people's views about evolution; b) designing/implementing/evaluating evolution education curriculum that reflects contemporary evolution understanding; and c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.
