## Laboratory exploration of PLANET EARTH: Introduction to the Earth System

### Introduction

This course is about you grappling with questions about planet Earth. You'll have the opportunity to explore a diverse range of topics, from earthquakes and volcanoes, to waves and estuaries, to dinosaurs, fossils, and others. The activities in this course are designed to help you achieve the following course-level learning goals:

By the end of this course, you will be able to:

- Make interpretations and draw conclusions based on observations and evidence in an earth system science context
- Apply qualitative and quantitative approaches to earth system data and samples
- Appreciate that earth systems science is exciting and relevant to society and our lives
- Recognize the interconnectedness of earth systems science

In this introductory lab, you'll get a chance to ask and explore some questions about our planet. What is Earth made of? How old is it? How do different kinds of rocks and minerals form? What happened to a rock between the time it formed and when you picked it up?

What to expect:

Each week we'll spend the 3-hour lab exploring a new aspect of Planet Earth. We give you all the necessary information each week to bring you up to speed, regardless of your academic background. Sometimes however, we won't give you all the necessary information in order to immediately understand something because we want you to stop and think about it – what would you expect? What do you observe? What scenarios could make sense? This may be frustrating at first, but it is a crucial step in learning that we often don't take time to do in lecture-based courses.
