CHAPTER 12
Two-Dimensional Geometry

The background is a lush, misty forest with tall trees and green foliage. In the foreground, the words "GO MATH!" are written in large, 3D, golden-yellow letters. The letters "G" and "O" are made of wood with a natural grain texture. The letters "M", "A", "T", "H", and the exclamation point are solid, bright yellow. Several monarch butterflies with orange and black wings are scattered throughout the scene, some resting on leaves and others in flight. Small red ladybugs are also visible on the green leaves.

Topology David Gay, 2007-08-07 Explorations in Topology gives students a rich experience with low dimensional topology
enhances their geometrical and topological intuition empowers them with new approaches to solving problems and provides
them with experiences that would help them make sense of a future more formal topology course The innovative story line
style of the text models the problems solving process presents the development of concepts in a natural way and through its
informality seduces the reader into engagement with the material The end of chapter Investigations give the reader
opportunities to work on a variety of open ended non routine problems and through a modified Moore method to make
conjectures from which theorems emerge The students themselves emerge from these experiences owning concepts and
results The end of chapter Notes provide historical background to the chapter s ideas introduce standard terminology and
make connections with mainstream mathematics The final chapter of projects provides opportunities for continued
involvement in research beyond the topics of the book Students begin to solve substantial problems right from the start Ideas
unfold through the context of a storyline and students become actively involved The text models the problem solving process
presents the development of concepts in a natural way and helps the reader engage with the material *To Infinity and*
Beyond Eli Maor, 2017-11-21 Eli Maor examines the role of infinity in mathematics and geometry and its cultural impact on
the arts and sciences He evokes the profound intellectual impact the infinite has exercised on the human mind from the
horror infiniti of the Greeks to the works of M C Escher from the ornamental designs of the Moslems to the sage Giordano
Bruno whose belief in an infinite universe led to his death at the hands of the Inquisition But above all the book describes the
mathematician s fascination with infinity a fascination mingled with puzzlement Maor explores the idea of infinity in
mathematics and in art and argues that this is the point of contact between the two best exemplified by the work of the Dutch
artist M C Escher six of whose works are shown here in beautiful color plates Los Angeles Times Eli Maor s enthusiasm for
the topic carries the reader through a rich panorama Choice Fascinating and enjoyable places the ideas of infinity in a
cultural context and shows how they have been espoused and molded by mathematics Science *Case Studies of High*
