Naval Architecture

- ▶ Naval architecture and marine engineering is the design of floating vessels and the integration of their components. It involves basic and applied research, design, development and calculations during the life of a marine vehicle.
- ▶ Naval architects design the vessels and determine their shapes and sizes. They evaluate it's stability, maneuvering characteristics, the supporting structures and the power needed to propel them through the waves.
- ▶ Marine engineers design the systems that allow these vessels to operate by integrating the engines strong and compact enough to support the craft in its missions.

Hydrostatics and Hydrodynamics

- ▶ **Hydrostatics** concerns the conditions to which the vessel is subjected while at rest in water, and its ability to remain afloat. It involves computing buoyancy.
- ▶ Some vessels are electrically powered using nuclear or solar energy.
