

The Jersey Development Corporation (JDC) plans to take part in three possible development projects to be launched in 2024. Each project requires a significant investment over the next six years, and then would be sold upon completion. The estimated cash flows (selling prices and costs, in millions of dollars) associated with each project are shown in the table below.

Year	Project A	Project B	Project C
1	-4	-8	-10
2	-6	-8	-7
3	-6	-4	-7
4	24	-4	-5
5	0	30	-3
6	0	0	44

JDC has \$5 million cash reserves available at the beginning of 2024; they also expect to receive \$6 million per year from other currently ongoing projects by the end of years 2024 (Year 1) through 2029 (Year 6). The corresponding cash amounts will be available for investments in the following years for projects A, B, and C. We assume that JDC can participate in each project according to a continuous decision scale (ranging from 0% to 100% participation). If JDC participates at less than 100% in a certain project, then all cash flow needs associated with that project are reduced proportionally. JDC plans to finance all project participation from its own resources, without receiving bank loans. JDC policy requires ending each year with a cash balance of at least \$2 million. Your task is to develop a spreadsheet model to analyze and solve the problem.
