

Electrical Interview Questions with Answers

Interview Questions on Electrical Machines:

Alternators:

[Q] What is the general system requirements of alternator?

For the generation of emf, there should be two basic systems.

- (i) magnetic field system to produce the magnetic field
- (ii) Armature system which houses the conductors on which the EMF is to be induced.

[Q] Will the alternators have rotating armature system or stationary armature system?

Generally in alternators, the armature is stationary and the field rotates. Small low-voltage alternators often have a rotating armature and a stationary field winding. But in large alternators rotating armature field type is used.

[Q] What are the advantages of stationary armature and rotating field system?

- (i) The stationary armature coils can be insulated easily.
- (ii) Higher peripheral speed can be achieved in the rotor.
- (iii) Cooling of the winding is more efficient.
- (iv) Only two slip rings are required to give DC supply to the field system
- (v) Output current can be easily supplied to the load circuit. Slip-rings and brushes are not necessary.

[Q] What is meant by stator? What is meant by rotor?

In any electrical machine (AC/DC motor or generator) the stationary member is called as stator. Similarly in all machines the rotating member is known as rotor.

[Q] What are the advantages of three phase motor over single phase motor?

Three phase motors are having

- (i) Higher starting torques
 - (ii) Improved speed regulation
 - (iii) Less vibration
 - (iv) Quieter operation
- compared to the single phase motors.
