

Fourth Grade Science: The Scientific Method

Introduction: Students will learn and explore all of the key parts of the Scientific Method including the question, hypothesis, materials, procedure, results, and conclusion. After they learn the key parts, they will have the opportunity to choose 1 of 2 experiment choices to use and practice the Scientific Method on.

Prior Knowledge: Students must know how to use safety precautions during experiments in the classroom, how to navigate certain technological resources such as YouTube, Mindmap, Educanon (video quiz throughout video), and Quibblo, and will have to know how photosynthesis in plants works (for the experiment).

Objective: To have students learn the Scientific Method and then to have them test out the entire process by conducting one of the two experiment choices. In addition, another objective is to have students understand the importance that light has in photosynthesis (seen during the experiment).

Materials:

First Part of Class: Smart Board, technological resources such as YouTube, Mindmap, Educanon (video quiz throughout video) Quibblo, and iPads for each student to use.

Second Part of Class: Materials for the experiment = brown paper bags, plastic cups, dirt, plant seeds, natural sunlight, water, sharpie, and Scientific Method worksheet.

Time: Total time for class = 1 hour, 15 min

Exploring the Scientific Method = First 45 minutes

Putting the Scientific Method into action in experiment = Last 30 minutes

Process:

First part of Class:

1. Students will watch a short video lecture created by the teacher (me) covering all of the basics about the Scientific Method. This will take 10 minutes.
2. Students will take out their iPads to do some learning on their own. They will watch a podcast about how to write a good scientific question with the link below:
