Computational Drug Discovery of Medicinal Compounds for Cancer Management Sibhghatulla Shaikh ,Khurshid Ahmad ,Mohammad Ehtisham Khan ,Faez Iqbal Khan , Cancer is still a major public health concern and it is regarded as one of the leading causes of mortality globally Despite significant advances in biotechnologies developing practical and innovative small molecule drugs remains a difficult time consuming and expensive task that necessitates collaborations from many experts in multidisciplinary fields such as computational biology drug metabolism and clinical research among others Therefore new drug development procedures that save time and cost while increasing efficiency are in high demand In silico screening in combination with molecular simulations has become an increasingly important aspect of modern drug development processes Understanding ligand protein interaction is critical in all areas of drug design and discovery Computational approaches such as molecular docking molecular dynamics simulations pharmacophore modeling and QSAR etc are efficient tools for obtaining insights on structure function relationships for small molecules and or medicinal compounds with target proteins and are widely used in the identification and optimization of leads The goal of the drug discovery process is to predict a drug candidate s metabolic fate in order to build a link between pharmacodynamics and pharmacokinetics and to identify the drug candidate s possible toxicity The advancement of in silico techniques in recent years has enabled researchers to collect more trustworthy data This Research Topic will focus on the use and application of computational methods that can aid in the drug design of medicinal compounds targeting various proteins for cancer management which is a critical requirement in the pharmaceutical sectors *Toxic Substances Sourcebook* ,1980 The professional s guide to information sources key literature and laws Also includes conferences books films directory of periodicals and data bases list of periodicals and statistics abstracts of papers presented technical reports and journal articles Miscellaneous indexes [Springer Handbook of Chem- and Bioinformatics](#) Jerzy Leszczynski,2025-12-31 The Springer Handbook of Chem and Bioinformatics provides an introduction as well as a detailed description of the application of various techniques used in chemo and bioinformatics It covers basic topics such as a discussion of computational techniques used in the predictions of structures properties and dynamics of small compounds macromolecules and their complexes Diverse applications of QSAR methods are also revealed Various chapters offer specifics of current methodologies used by research labs in the pharmaceutical industry for drug design Modern computational approaches taking advantage of searching big data using artificial intelligence and machine learning are discussed while the necessity of applying such advanced novel techniques for bio and chemo informatics is revealed This handbook combines nicely together discussion and assessment of both closely related fields of modern informatics It is a welcome addition to the university libraries research institutes as well as to basic textbook resources of individual researchers The target audience includes students both graduate and advanced undergraduate university researchers scientists working in private and governmental laboratories as

well as a large group of developers from pharmaceutical and medical institutes and related industrial research centers
