Achievement in Economics of Higher Secondary Students in Relation to Academic stress, Classroom climate and Self-Confidence

Prof.Dr.K.GEETHA,2023-09-25 In this book I have clearly pointed out that parental pressure acts as a significant stressors and appropriate level of Stress experienced by students due to challenging stimulus can lead to positive outcomes such as motivation and improved task performance while threatening ones can result in anxiety depression and social dysfunction The positive enjoyable and productive classroom climate helps the students to succeed in academic achievement in economics and develops their potentials and individuality It is in the hands of the teachers to create a positive classroom climate by considering carefully the basic principles of an effective classroom management plan The roles of the school and teachers have always been vital in developing the students innate potentials and all round personality development

The Economics of Climate-Resilient Development Sam Fankhauser,Thomas K.J. McDermott,2016-07-27 Some climate change is now inevitable and strategies to adapt to these changes are quickly developing The question is particularly paramount for low income countries which are likely to be most affected This timely and unique book takes an integrated look at the twin challenges of climate change and development The book treats adaptation to climate change as an issue of climate resilient development rather than as a bespoke set of activities flood defences drought plans and so on combining climate and development challenges into a single strategy It asks how the standard approaches to development need to change and what socio economic trends and urbanisation mean for the vulnerability of developing countries to climate risks Combining conceptual thinking with practical policy prescriptions and experience the contributors argue that to address these questions climate risk has to be embedded fully into wider development strategies

Rethinking the Economics of Land and

Housing Josh Ryan-Collins, Toby Lloyd, Laurie Macfarlane, 2017-02-28 Why are house prices in many advanced economies rising faster than incomes Why isn't land and location taught or seen as important in modern economics What is the relationship between the financial system and land In this accessible but provocative guide to the economics of land and housing the authors reveal how many of the key challenges facing modern economies including housing crises financial instability and growing inequalities are intimately tied to the land economy Looking at the ways in which discussions of land have been routinely excluded from both housing policy and economic theory the authors show that in order to tackle these increasingly pressing issues a major rethink by both politicians and economists is required *Productivity in Higher Education* Caroline M. Hoxby, Kevin Stange, 2020-01-10 How do the benefits of higher education compare with its costs and how does this comparison vary across individuals and institutions These questions are fundamental to quantifying the productivity of the education sector The studies in *Productivity in Higher Education* use rich and novel administrative data modern econometric methods and careful institutional analysis to explore productivity issues The authors examine the returns to undergraduate education differences in costs by major the productivity of for profit schools the productivity of various types of faculty and of outcomes the effects of online education on the higher education market and the ways in which the productivity of different institutions responds to market forces The analyses recognize five key challenges to assessing productivity in higher education the potential for multiple student outcomes in terms of skills earnings invention and employment the fact that colleges and universities are multiproduct firms that conduct varied activities across many domains the fact that students select which school to attend based in part on their aptitude the difficulty of attributing outcomes to individual institutions when students attend more than one and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution The findings and the approaches illustrated can facilitate decision making processes in higher education
