

## **Observation and Field Notes**

Observational data refer to the raw materials an observer collects from observations, interviews, and materials, such as reports, that others have created. Data may be recorded in several ways: written notes, sketches, tape recordings, photographs, and videotapes. The purpose for observing a system being used is to obtain in a limited amount of time relevant data needed to change and/or improve the system.

### **What to look for when doing observation?**

1. Physical setting.
2. Activities.
3. Human, social environment. The way in which human beings interact within the environment. This includes patterns of interactions, frequency of interactions, direction of communication patterns, decision-making patterns.
4. Formal interactions.
5. Informal interactions and unplanned activities.
6. Nonverbal communication.
7. Observing what does not happen.

### **What are field notes?**

Field notes refer to transcribed notes or the written account derived from data collected during observations and interviews. There are many styles of field notes, but all field notes generally consist of two parts: descriptive in which the observer attempts to capture a word-picture of the setting, actions and conversations; and reflective in which the observer records thoughts, ideas, questions and concerns based on the observations and interviews.

Field notes should be written as soon as possible after the observation and/or interviews. The original data may be recorded in cryptic form, and unless they are fleshed out as soon as possible after the observation, important details may be forgotten and not appear in the field notes. Field notes are used to "broaden your range of vision" and produce data that will be of use in later stages of the system design.

### **Characteristics of field notes**
