

Unit 9: Human Regulation and Reproduction

Regulation of the cardiovascular and respiratory systems

Introduction

The human body is made up of different systems such as the nervous system. The main function of the nervous system is that it generates, transmits, and interprets impulses from and to the different body systems. The nervous system is divided into two main different organisations that include the central nervous system (CNS) and the peripheral nervous system (PNS). The flowchart below shows the different divisions of the nervous system:

As shown in the above diagram, the two components of the CNS are the brain and the spinal cord. The function of the brain is to receive and process sensory information as well as initiate responses but also to store memories, generate thoughts and emotions. Alternatively, the function of the spinal cord is to conduct signals from and to the brain as well as controlling any type of reflex activities. However, the PNS is different from the CNS. This is because, it is separated into two groups that are named as the somatic nervous system (SNS) and the autonomic nervous system (ANS). The SNS is also known as the voluntary nervous system and its function is to control the conscious tasks such as writing whereas the function of the ANS, also known as the involuntary nervous system, is to control the unconscious tasks such as digestion.

The ANS is further divided into two categories that are very distinct from one another and they consist of the parasympathetic nervous system and the sympathetic nervous system. The parasympathetic nervous system consists of maintaining the functions of the body in an individual's everyday life. For example, a few actions that the parasympathetic nervous system carries out on the body is that slows down the heartbeat, it also stimulates the flow of the saliva and constricts pupils. Alternatively, the sympathetic nervous system prepares the reaction in an individual's body in emergency situations. For example, a few of the actions that the sympathetic nervous system carries out on an individual's body include the dilation of pupils, the acceleration of the heartbeat, and inhibition of the flow of saliva.

The nervous system is also made up of neurons that are cells that transmit electrical impulses in the form of action potentials between the brain and the body tissues and organs. Sensory and motor neurons are found in the PNS. Another type of neuron is a relay neuron, which is mostly found in the CNS. They all have different functions as the sensory neurons, which are also known as afferent neurons, carry impulses from the receptors to the CNS, whereas relay neurones, which are also known as interneurons, connect the sensory neurones to the motor neurones in the CNS allowing the motor neurons, which are also known as the efferent neurones, to carry the impulses from the CNS to an effector to allow movement to take place. The structure of the different neurons is shown below:

Metabolism of Human Diseases Eckhard Lammert, Martin Zeeb, 2026-01-27 This second edition of the highly successful textbook *Metabolism of Human Diseases* expands on the role of key molecules in the human body and how their defective metabolism leads to common human diseases. This textbook integrates concepts from biochemistry, physiology, and pathophysiology to provide a comprehensive overview of organ and tissue specific metabolism and signaling pathways that contribute to human diseases. The chapters focus on the metabolic processes of the main organs in the human body, highlighting on many diseases that are frequently diagnosed, have high mortality rates, and are costly to treat. As metabolic research continues to unveil critical insights into physiology and pathophysiology, this edition incorporates the latest findings to enhance our understanding of how defective metabolism and signaling pathways contribute to prevalent conditions such as Alzheimer's disease, depression, diabetes, food intolerance, heart failure, macular degeneration, and cancer. Authored by over 100 international experts, it serves as a vital tool for anyone dedicated to understanding the complexities of human diseases through the lens of metabolism. It not only provides a comprehensive resource on the metabolic mechanisms of diseases but also presents therapeutic strategies to combat them. Ideal for graduate students, postdocs, and scientists in metabolic research, biochemistry, and physiology, as well as physicians interested in molecular mechanisms of human physiology and disease.

The Handy Science Answer Book, 2011-04-01 Presenting a fun and educational way to explore the wonders of the world of science, this newly updated edition poses and answers 2,200 questions, providing an abundance of original and interesting science facts. Children and adults will uncover some of the most interesting, unusual, and quirky science curiosities, such as: Are cell phones dangerous to your health? Is the same strain of yeast used to make different types of beer? What is the cleanest fossil fuel? What is the largest invertebrate? Readers will find this informative and enjoyable resource is chock full of hundreds of intriguing science and technology topics, from the inner workings of the human body and outer space to math, computers, planes, trains, and automobiles.

Assisted Reproduction Techniques Khaldoun Sharif, Arri Coomarasamy, 2021-06-02 Assisted reproduction techniques have led to the birth of 8 million babies worldwide. Assisted reproduction techniques, ART, in particular, in vitro fertilization and intra-cytoplasmic sperm injection, are the most advanced forms of infertility treatment. They involve numerous counseling, medical, surgical, and laboratory-based steps. At each step, various problems and complications could be encountered that challenge even the most experienced ART practitioners. Moreover, patients with complex medical disorders may require ART, presenting further challenges. Assisted Reproduction Techniques will stimulate resourceful thinking in the ART practitioner when faced with these challenges. It outlines various management options, the reasoning behind them, and the evidence on which they are based, to enable the practitioner to choose the most suitable solution for the needs of each patient. Written by 171 internationally renowned experts, *Assisted Reproduction Techniques* follows the patient's journey throughout the whole ART

process with chapters on Counseling and preparation Pituitary suppression and ovarian stimulation Oocyte retrieval Embryo transfer The luteal phase The ART laboratory The male patient The ART pregnancy General and organizational issues Each of the 116 concise chapters includes clinical cases background evidence based practical management options preventive measures key point summaries of the important details and answers to questions patients ask Assisted Reproduction Techniques first edition has established its place as a must read for ART trainees and practitioners alike and in this second edition all chapters have been updated with the addition of new ones addressing training issues organizational and business skills and social media use in ART
