

Hormones in Human Reproduction

The functioning of the human reproductive system is regulated by hormones in both males and females. The following diagram illustrates the hormonal control of the menstrual cycle and pregnancy.

♀ Females

In females, the main reproductive hormone, oestrogen, is produced by the ovaries. It helps facilitate the menstrual cycle and the development of female secondary sex characteristics.

At puberty, eggs already formed in the ovaries begin to mature, and one is released approximately every 28 days (ovulation).

Hormones in Males and Females

♂ Males

In males, the main reproductive hormone, testosterone, is produced by the testes. Testosterone stimulates sperm development at a constant rate from puberty.

In both sexes, reproductive hormones control the development of secondary sex characteristics, such as breast development, voice breaking and body hair growth.

The Menstrual Cycle

During the menstrual cycle, an egg is released from one ovary, and the female's uterus is prepared for a possible pregnancy. If the egg is not fertilised, the uterus reverts to its original state by shedding its lining in the process of menstruation (a period, when blood is lost).

The process is controlled by several different hormones.

Follicle-stimulating hormone (FSH) is released by the pituitary gland. It causes the maturation of the egg cell in the ovary and stimulates the production of oestrogen by the ovaries.

Luteinising hormone (LH) is produced by the pituitary gland and stimulates ovulation, the release of eggs from the ovaries, at 14 days.

Oestrogen and progesterone are produced in the ovaries. Both control the development and maintenance of the uterus lining in preparation for pregnancy.

FSH causes the maturation of an egg.

Oestrogen causes growth and repair of uterus lining.

Ovulation is caused by a peak in LH. During this time, there is also a fall in oestrogen.

Progesterone continues the development of the uterus lining.

Menstruation is brought about by a fall in progesterone and oestrogen.
