## Week 4 - Electric Potential

Due: 10:00pm on Monday, October 22, 2012

**Note:** You will receive no credit for late submissions. To learn more, read your instructor's [Grading Policy](#).

## Energy Stored in a Charge Configuration

Four point charges, A, B, C, and D, are placed at the corners of a square with side length  $L$ . Charges A, B, and C have charge  $+q$ , and D has charge  $-q$ .

Throughout this problem, use  $k$  in place of  $\frac{1}{4\pi\epsilon_0}$ .

## Part A

If you calculate  $W$ , the amount of work it took to assemble this charge configuration if the point charges were initially infinitely far apart, you will find that the contribution for each charge is proportional to  $\frac{kq^2}{L}$ . In the space provided, enter the numeric value that multiplies the above factor, in  $W$ .

## Hint 1. How to approach the problem

The Coulomb's force is conservative. If we define the potential energy of the system to be zero when the charges are infinitely far apart, the amount of work needed to place any one charge in a configuration is equal to its electric potential energy. Imagine moving charge A, then B, then C, and finally D into place. Find the work required to add each charge to the configuration by calculating the potential energy of each just after it is added. Add the work required for each charge to find the total work required.

## Hint 2. Electric potential and potential energy

Recall that the electric potential at a point at distance  $r$  from a charge  $q$  is  $V = k\frac{q}{r}$ , where  $k = \frac{1}{4\pi\epsilon_0}$ . Note that this equation implicitly defines the electric potential to be zero at  $r = \infty$ . The electric potential energy of a charge  $q$  is equal to  $qV$ , where  $V$  is the electric potential at the position of the charge before the charge is placed there. To find the potential at a point due to multiple charges, sum the potentials at that point due to each charge.

## Hint 3. Work required to place charge A

What is  $W_A$ , the work required to assemble the charge distribution shown in the figure?
